

PROJECT REPORT

TITLE:

Task Management Application

SUBMITTED BY:

NADIKOPPU BHAVANI

ABSTRACT:

The Task Management Application is a full-stack web application developed to help users create, manage, update, and track daily tasks efficiently. The application provides a simple and user-friendly interface where users can organize their work using task statuses such as To Do, In Progress, and Done. The project demonstrates CRUD operations, authentication, responsive design, and dynamic data handling in a real-world application.

INTRODUCTION:

Managing tasks manually can be difficult and time-consuming. A Task Management Application helps users organize their activities digitally and improve productivity. This application allows users to add new tasks, edit existing tasks, delete tasks, and monitor progress easily through a web interface.

OBJECTIVES:

- To develop a responsive task management system
- To implement CRUD operations for tasks
- To provide task status tracking
- To understand frontend and backend integration
- To learn API handling and database connectivity

TECHNOLOGIES USED:

Frontend:

- HTML
- CSS
- JavaScript
- React.js

Backend:

- Node.js
- Express.js

Database:

- MongoDB

TOOLS:

- Visual Studio Code
- GitHub
- Google Colab

SYSTEM FEATURES:

- User Authentication and Authorization
- Create New Tasks
- Update Existing Tasks
- Delete Tasks
- Track Task Progress
- Responsive Web Design
- Dynamic Data Handling

WORKING PROCESS:

1. User logs into the application.
2. User creates a new task.
3. Task details are stored in the database.
4. User can edit or delete tasks.
5. Task status can be changed to To Do, In Progress, or Done.
6. Updated information is displayed dynamically on the dashboard.

SAMPLE TASK:

Task Title: Refactor API Pipeline

Status: In Progress

Priority: High

ADVANTAGES:

- Easy task organization
- Improves productivity
- Simple and user-friendly interface
- Accessible on mobile and desktop devices
- Helps track work progress efficiently

FUTURE ENHANCEMENTS:

- Real-time updates using WebSockets
- Task notifications and reminders
- Team collaboration support
- Dark mode feature
- File attachment support

CONCLUSION:

The Task Management Application successfully demonstrates the implementation of a full-stack web application with task tracking functionality. The project improves understanding of frontend-backend communication, CRUD operations, authentication, API integration, and responsive UI design. It is useful for managing tasks efficiently in both personal and professional environments.
